The figure contains two line graphs. The left graph plots 'Rate of reaction' on the y-axis against 'Temperature' on the x-axis. The curve starts at a low rate at low temperature and rises steeply, becoming a nearly straight line with a positive slope at higher temperatures. The right graph also plots 'Rate of reaction' on the y-axis against 'Temperature' on the x-axis. This curve starts at a low rate and rises more gradually than the one in the left graph, also becoming a straight line at higher temperatures.
